Has anyone connected the Motorola Xoom and tried the WiFi hot spot? Not I, it's a bit expensive but would love to try it. If DaveJ is not using an Android Tablet maybe you should provide him with one fully connected. I'll check with G.A.#004 on what G.A.#001 is currently using.

Jim,

My Verizon MiFi that I got from you guys has failed (battery charge connector hardware failure). I will bring it down.

Have you had a chance to evaluate the 4G MiFi's from Verizon? What about any other 3G or 4G modems?

Thanks, G.A.#001

MAL-00816

All,

The best date for a meeting on Jim's schedule for the week of the 12th is Tuesday the 13th of September. **G.A.#004** can you check if that day is good? Jim also wanted to point out that the Braves play at home on Monday, Tues, Wed, and Fri that week.

Jim

Per our discussion today **G.A.#003** and I would like to visit next week. How about Thursday afternoon, your choice; I believe Wed, Thur or Fri are all fine but we can work around anything. Meet at the barbeque for lunch at 11:00 and then have our meeting starting at 12:00. Meeting objective is to agree on the next steps, talk about personnel and near term objectives and prepare for a meeting with **G.A.#001** sometime between 26 Feb and 9 Mar. I need some tentative dates for **G.A.#001** soon so he can plan his trips -- sooner is better for **G.A.#001** but not 1 Mar.

The contract will be funded (\$279K} soon, CO has agreed, and there will be some security changes. We will have a draft SOW to discuss next Thur, a proposed plan of activities for the near term and hopefully leave some hardware with you.

.Regards **G.A.#002**

Jim

Looks like I got Catwomans e-mail wrong the first time.

How about a video telecom later this week? Thur or Friday at your convenience. I had a chat with Jesse James on the last meeting and am wondering how the Assistant work is progressing.

Question -- do you have the latest data on the WiSpry MEMs?? Looks like it is all dated 03/16/2009. I got it from Jim Smith last week.

If all goes well they may let me start walking next week!!!

**G.A.#001**

FYI, I made contact with Jim Smith and asked about GainSpan. He put me in touch with Jay Emmanuel the Program Manager for the GainSpan work. Jay said Catwoman (or anyone else Houdini would send) could attend an Oct meeting on the GainSpan software. He also stated that there was a mid Nov. meeting planned on strategic issues with their product and suggested we attend. **G.A.#001** & **G.A.#002** will be attending. Houdini will be calling Jay this week to manage the relationship. I have no idea what **G.A.#001** is doing. If it looks like there will be any conflict please let me know.

I don't think it is necessary but if you see Jim Smith please remind him that you are supporting the effort.

Sorry I missed the last meeting but I am still a pretty slow mover.

I love it -- we should buy one! and see whats interesting. Could we get the license Plate Reader working on this platform. Ultimately we build our own platform with better optics and more processing power.

Here is something for monitoring remote sites like motel rooms. Just make it smaller and a bit more controllable. Buy one of these also!

Jim

How about buying a few of these Zoom "Wireless Leashes". If they work give one to DaveJ when you go up there. [www.zomm.com](http://www.zomm.com)

Also, get a few of these [www.dropcam.com](http://www.dropcam.com). Monitor your motel room using WiFi or the iPhone app. Both are not perfect but it is a start at video surveillance monitoring. Another video one that looks interesting is <http://vuezone.com>

How about a video telecom sometime next week? Late afternoon. I am going nuts. Two weeks to go before I can put all my weight on the new hip.

Jim

I know you are traveling but I just tried anyway to contact Brad to find out if we are still planning on a Friday meeting at your place. I assume he is with you. If we all can make a 1:00PM meeting Friday I don't see the need for an iCHAT. If not then, when? Just let us know.

Here are a couple of articles on Android. Question for us is still how do we play into Android software? Certainly our customer has all the access it needs if it is aggressive enough to go after it. I think our niche is in apps that interface to sensors and any new ideas in controlling the image our app presents to the 'outside'.

I suggest you buy a few Motorola Xoom tablets and let's see what we can do -- I do believe they were selling last week at Atlanta Costco for \$565. If you agree can we get them Friday?

Open question -- where do we find Android SW expertise in GTRI, i.e. access to some of the basic code (remember I am not SW knowledgeable) ???

See these articles for a different views of Android. Seems like the more 'Wild West' it is the better for us as long as there are many users out there.

Subject: Wearable cameras

Guys,  
Here is some data on wearable cameras.

**G.A.#003**

These little cameras are generally small, compact, and rugged to some extent to survive the rough and tumble outdoors. Not all of them are water resistant and some have to be inside a housing to be impact resistant. No matter what you are a fan of be it car racing, surfing, or sky diving there is a camera that will be perfect for you.

Most of these camcorders lack an LCD. That means you won't be able to view what you recorded without a computer nearby. Most of them are also powered by rechargeable batteries. Some of the cameras will ship with lots of mounts and others come with the camera alone. So be sure you get the mounts you need for your application. Read on for my list of the top five wearable camcorders.

1. GoPro HD motorsports Hero<[https://www.amazon.com/dp/B002VA57XC/ref=as\\_li\\_ss\\_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B002VA57XC&adid=1E0JXZFRZSX0YYYKJZ8&](https://www.amazon.com/dp/B002VA57XC/ref=as_li_ss_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B002VA57XC&adid=1E0JXZFRZSX0YYYKJZ8&)> - If you are into racing or any sort in a vehicle or on a motorcycle the GoPro is for you. This camera comes with all sorts of mounts, can connect to a helmet, and has a suction cup for mounting to a car. The suction cup is strong enough to keep the camera in place at high speeds and with lots of vibration. The camera is also waterproof when inside its little plastic case. This camera has so many mount options you will find the best for your needs. The camera sells for \$299.99. This camera does 1080p HD resolution recording.

2. Veho Micro DV Muvi Camcorder<[https://www.amazon.com/dp/B002VA57XC/ref=as\\_li\\_ss\\_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B002VA57XC&adid=1E0JXZFRZSX0YYYKJZ8&](https://www.amazon.com/dp/B002VA57XC/ref=as_li_ss_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B002VA57XC&adid=1E0JXZFRZSX0YYYKJZ8&)> - This tiny little wearable camcorder is offered with a mount kit that lets you wear it wherever. It had a lower resolution of 2MP but it needs no case to be rugged. The camera records to microSD cards and has a rechargeable battery inside. The camera alone costs about \$60.

3. ContourHD Camcorder<[https://www.amazon.com/dp/B002QGSYZ4/ref=as\\_li\\_ss\\_til?tag=i4ufututechne-](https://www.amazon.com/dp/B002QGSYZ4/ref=as_li_ss_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B002QGSYZ4&adid=1A1709XD7Q7HVBB06EN3&)

20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B002QGSYZ4&adid=1A1709XD7Q7HVBB06EN3&> - This is a camcorder that is designed to be rugged without needing a case of any sort. The camera is larger than the GoPro and records 1080p HD resolution video. It has a 5MP image sensor and an internal microphone. The battery is removable and is good for up to four hours of recording. The body of the camera is aluminum and fiberglass and is water resistant. A number of mounts are available for putting the camera on whatever you want to mount to. Video is recorded to microSD cards. This version of the camera sells for about \$250.

4. Midland XTC100VPS SD Extreme Action

Camcorder<[https://www.amazon.com/dp/B003DNSIOQ/ref=as\\_li\\_ss\\_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B003DNSIOQ&adid=0JCRE3G9MEZR7NZPKMZC&](https://www.amazon.com/dp/B003DNSIOQ/ref=as_li_ss_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B003DNSIOQ&adid=0JCRE3G9MEZR7NZPKMZC&)> - This is a very strange looking little camcorder that records in 640 x 480 resolution. It records to SD cards and includes helmet mounts and Velcro pads to mount the camera to other surfaces. It has a 140-degree wide-angle lens and a rechargeable battery inside. The camera sells for under \$75.

5. Drift Innovation HD170 Stealth Action

Camera<[https://www.amazon.com/dp/B004L5AF4Q/ref=as\\_li\\_ss\\_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B004L5AF4Q&adid=1EAYG5029HS2YSF01QN6&](https://www.amazon.com/dp/B004L5AF4Q/ref=as_li_ss_til?tag=i4ufututechne-20&camp=213381&creative=390973&linkCode=as4&creativeASIN=B004L5AF4Q&adid=1EAYG5029HS2YSF01QN6&)> - This is an interesting camera that has a remote button that can stop and start the recording. The camera has an LCD integrated, which is something none of the others on this list has. It can record 720p and 1080p video with a 170-degree wide-angle lens. It has a night mode and 4x digital zoom as well. It can also shoot 60fps for slow motion video. The remote is cool because it will allow you to turn the camera on if it is mounted in a place where you can't easily reach it. This camera sells for about \$350.

Guys,  
This may be of some interest.

Pixeet seems to be a neat little accessory and app kit for the iPhone that makes taking 360 panorama shots really easy. Pixeet consists of an iPhone case, a miniature fish eye camera lens and a free app.

The lens can capture 180-degree panoramas in one shot, or you can take four shots with your camera and then the software creates a 360 degree panorama which you can publish instantly on any media or upload to a free Pixeet account. The app (software) offers a full 360 degree panorama. Pixeet promises that BlackBerry and Android versions are "coming soon".

**G.A.#003**

Although the web site says \$49.90, there is a \$15 shipping and handling fee, so the cost is \$64.90 and payment must be through PayPal.

C Please send me your slides on SA, not the antenna stuff, to guac. I'll make some comments and get them back to you by Monday. We should get them to S before his meetings next week. He won't use them but they will help him solidify his thoughts.

I thought the meetings went well. They are easy to work with and obviously offer a lot of customized manufacturing capability for your antenna systems and an insight into the basic requirements. They also have a couple of very bright antenna people, I assume they are still there given the destruction of their corporate research capability, that you should develop a relationship with. **G.A.#002**

All: I talked with Jesse James a few week ago and he said the late November meeting out west was to be canceled -- looks like he was right. He also stated there will be one at their place in NVA in early Dec. -- again all on radios and antennas. I don't know what is happening - anyone heard anything? If that Dec. meeting happens, does GTRI have anything to give them on the SA efforts. What was purchased and evaluated? Is there anything there to start trying out in the real world? When Jesse and I talked about how to insert our SA ideas, the conclusion was along Jim Maloney's concept of providing simple capability concept briefs with functionally capable hardware that the customer can use and evaluate value and not deals with the special issues. I have to admit the automobile industry efforts on smart cars that drive themselves and DARPA work on SA are impressive. The WSJ today discussed Volvo's effort to drive your car for you in 35 mph or less situations -- talk about real SA awareness!

**G.A.003**, Jim Is there an easy way for us to encrypt the text of our emails. I would like to discuss what problems we are trying to solve, then attack the technologies in context but I struggle with explaining the problems we are trying to solve. Any ideas? **G.A.002**

Darryl As you put together a plan for integrating the SA ideas we discussed last week consider including a Car Camera (<http://www.carcamcentral.com/>) as well as a body worn camera. Ed's email shows their growing popularity. I have not seen many but I do see a lot of car GPS units where we could put a video camera. **G.A.#002**

**G.A.#002**  
As we discussed, if you Google "Russia dash cam" you will get lots of hits mainly displaying the videos so produced. Here is one link that also tries to explain why over 1 million Russians have installed Dash Cams. Don't know about the rest of the world, but I'll see what I can find out.

<http://mashable.com/2013/02/15/why-russians-have-dash-cams-caught-meteor/>

Here is another link to a serious discussion of the implications of wearable computers and their accessories.

I'm at Walmart and couldn't find those tags he mentioned. Checked electronics and auto/hardware as well.

Hey **G.A.#002**

We've gotten a good outline together I believe. What about, say, next Wednesday sometime? Would that work for you? Then we should be able to finish the concepts/white papers by next Friday. We are looking at PPP, PSP, PAA, and perhaps the concept of the "dual personality" apps (based on whether or not they are plugged in) which also leads to the concept of loading necessary apps from the charger itself in the comfyness of your hotel room.

In the meantime, I'll be taking a look at the links you sent over. Thanks!

Brad mentioned that the server he set up the chat on (Wld Weasel?) doesn't exist anymore. He mentioned that "guacamole" might work.

I'm thinking though we could just call if that's OK. I can call you and then conference in Ed. Would that work?

Here are the papers.....

Hey **G.A.002**

I hope you had a good weekend (and Father's Day).

How did you want to do the meeting tomorrow? I know you mentioned iChat, but were you talking about FaceTime via our Macs/i-Devices or something else?

Thanks,

**W. Darryl Wright**
